Education

Ohio University | Athens, Ohio

Expected May 2029

Bachelor of Science in Computer Science, Artificial Intelligence

GPA: 3.3

Relevant Coursework: Programming in Java, Discrete Structures, Data Structures, Software Tools

Technical Skills

Languages: Java, Python, C++, JavaScript, TypeScript, Go

Technologies: Git, Docker, SQL, SQLite, React, Vite, Node.js, Express.js, REST APIs

Projects

AI Codenames Research Platform | *Undergraduate Research*

Apr 2026 – Present

Go, Svelte, SQLite, Ollama, WebSockets

- Extended an open-source Go/Svelte game server with an AI-player layer that enables language-model agents to participate alongside humans in a Turing test study.
- Implemented a local Ollama LLM backend with validated structured output, deriving clue counts from model-selected target words and retrying failed responses within a shared timeout budget.
- Designed a clue-delay subsystem that masks AI response latency by validating clues synchronously while deferring commit and broadcast, backed by 13 automated tests using an injectable clock.

SkillTape | *Personal Project*

Jul 2026 – Present

React, Node.js, Express, SQLite, Electron, Ollama

- Built a full-stack spaced-repetition study platform with 21 REST endpoints, 23 React components, and a 12-table SQLite schema, deployable through the web, Docker, and Electron desktop.
- Integrated FSRS scheduling over an append-only attempt log, storing per-item attempts so review state and leech detection can be derived retroactively.
- Implemented LLM-based free-response grading with a local Ollama model, computing grades deterministically server-side from per-criterion booleans rather than trusting model-supplied scores.

OU Dining Tracker | *Two-person Project*

Mar 2026 – Present

React, Node.js, Express, SQLite, Puppeteer

- Built a Puppeteer scraper collecting nutrition data across 13 campus dining locations, using a composite unique constraint and `INSERT OR IGNORE` so daily re-runs stay idempotent.
- Developed the React frontend and client persistence layer, including a versioned `localStorage` schema with migration-on-read so logged entries remained editable after a format change.
- Designed a date/meal offerings table enabling per-day menu queries, with an indexed date lookup and debounced search against SQL-side deduplication.

Experience

Rite Rug | Whitehall, Ohio

Jun 2024 – Aug 2025

- Coordinated flooring sample inventory and distribution for a 5-person team supplying multiple regional locations.
- Trained new team members on sample handling and order fulfillment, serving as the go-to reference for procedures.

Leadership Activities and Memberships

Software Development Club & AI Clubs | Athens, Ohio | *Member*

Aug 2025 – Present

- Built containerized web applications with React, Vite, and Docker; ran local LLMs via Ollama and studied neural-network architecture.
